DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 04 April 2001, fails to comply with 37 CFR 1.98(a)(1), which requires a list of all patents, publications, or other information submitted for consideration by the Office. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Objections

2. Claims 8, 16, 24 and 32 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Allard et al. U. S. Patent (6,018,619).

5. Regarding claims 1, 9, 17 and 25 Allard teaches and describes a system and method for tracking user activity on information servers, that relates to client-side usage tracking for computers connected by a communications network according to the client-server model, comprising:

- an interface of a target application, the interface comprising a plurality of operations to be selected by a user (col. 1 line 50 to line 60 and col. 5 line 22 to line 26);

- a monitoring device configured to monitor data of selecting of the plurality of operations of the interface by the user, and to encode and store the monitored data into a log-file; and a communicating device configured to receive the log file of the monitored data, to decode the stored encoded log file, to create a message of the monitored data, and to then communicate the message of the monitored data (col. 4 line 47 to col. 8 line 20).

6. Claims 2-6, 10-16, 18-24 and 26-32 are rejected applied as above rejecting claims 1, 9, 17 and 25. Furthermore, Allard teaches and describes that generally relates to network monitoring systems, and particularly relates to a client side usage monitoring and processing by recording user interaction with application software in a network environment, comprising:

- the target application is a software application and the interface is a display screen of the software application; and the target application is an image forming device and the interface is an operation panel of the image forming device; and the target application is an appliance and the interface is an operation panel of the appliance (col. 4 line 58 to line 61 and col. 2 line 29 to line 40);

- the communicating device sends the log of the monitored data when the user exits the target application (col. 5 line 55 to col. 6 line 7);

- a setting unit configured to set a number of sessions of the target application to be executed by the user prior to the communicating device communicating the log file of the monitored data (col. 4 line 62 to line 65);

- the monitoring device encodes the monitored data into the log file and the communicating device decodes the monitored data from the log file by defining the encoding and decoding objects as abstract classes and defining derived classes to include encoding and decoding algorithms (Fig. 3, Abstract, and col. 11 line 11 to line 21 and col. 11 line 62 to col. 12 line 10).

Art Unit: 2155

- the communicating device communicates the log of the monitored data by Internet mail
(Fig.1 and col. 5 line 36 to line 43).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U. S. Patents (5706210), (5715397), (5778183), (5878420), (5964839), (6018619), (6029145), (6178457), (6244758), (6351847), (6393474).
